

How to Check Botted Videos—Complete Guide

Your responsibility is to protect the campaign budget.

Fake views = no payout. Always review carefully before approving any submission.

This guide explains how to detect fake or bottled engagement, platform by platform, and through graph analysis.

Core Principle Before Platform Checks

Never rely on one signal only.

Always check:

- View count
- Likes
- Comments
- Shares (if visible)
- Account history
- View graph behavior

If something feels off, investigate further. If clearly bottled, reject immediately. If suspicious but not 100% confirmed, reject and request analytics in ticket.

1. Clearly Botted Videos (Obvious Cases)

These are the easiest to detect.

Scenario: High Views, Almost No Engagement

Examples:

- 10,000+ views with almost no likes
- 10,000+ views with 1–3 comments
- 20,000+ views and comments are irrelevant or generic

On short-form platforms, views and engagement move together. If views increase but engagement stays flat, that is a red flag.

Comment Red Flags

- Comments not related to the content
- Generic phrases repeated
- AI-style comments with no context
- 3–5 random comments on a 50K+ video

If clearly botted:

- Reject submission immediately
 - Ban only if you are 100% sure
 - Do not over-explain
-

2. TikTok Review Guide

TikTok requires engagement balance. Views without comments are suspicious.

Minimum Expectation at 10K+ Views

- Some real comments
- Likes growing along with views
- Engagement that looks natural

Red Flags on TikTok

- 10K–20K views with no comments
- Views increasing but likes frozen
- Sudden jump from 1K views to 20K views
- Comments that don't relate to the video

When to Reject

- No comments at high views
- Clearly fake engagement pattern
- View graph shows abnormal spikes

If unsure:

- Reject

- Ask for analytics in ticket
-

3. Instagram Review Guide

Instagram requires deeper inspection.

Scenario A: Small Page, Sudden Explosion

- Average views: 100–200
- Suddenly: 10K–20K views
- Only 100–200 likes
- No real comments

This is highly suspicious.

Scenario B: Medium Page (1K–10K Followers)

If every video gets:

- 10K+ views consistently
- But very low comments
- And low engagement ratio

Check comments carefully.

Comment Pattern Check

- Are comments relevant?
- Do they match the content?
- Are they generic spam comments?

If comments look fake → reject and request analytics.

Checking Instagram Likes Manually

Open profiles of people who liked the post.

Fake like accounts usually:

- Follow thousands of people

- Have almost no followers
- Post random or low-quality content
- Look inactive or bot-like

If majority of visible likes look fake → reject.

4. YouTube Review Guide

YouTube engagement can be lower than other platforms. Do not compare it directly with TikTok.

Normal Scenario

- 30,000 views
- 100–200 likes
- A handful of real comments

This can be normal.

Red Flags

- 100K views with 3–5 comments
- Comments not related to video
- Comments look automated
- Huge spike in views within short period

Comment Sequence Check

If comments:

- Appear in similar format
- Are posted close together
- Do not relate to content

Reject and request analytics.

5. View Graph Analysis (Very Important)

The graph tells you most of the story.

You will see separate lines for:

- Views
- Likes
- Comments
- Shares

Healthy Graph Behavior

- Views increase gradually
- Likes increase along with views
- Comments rise proportionally

All lines should move somewhat together.

Red Flag Pattern 1: Likes Freeze

Example:

- Video reaches 1,000 views and 100 likes
- Suddenly jumps to 20,000 views
- Likes remain at 100

This indicates artificial view injection.

Red Flag Pattern 2: Late Like Spike

Example:

- Views rise steadily
- Likes remain flat
- Suddenly likes jump from 5 to 100 instantly

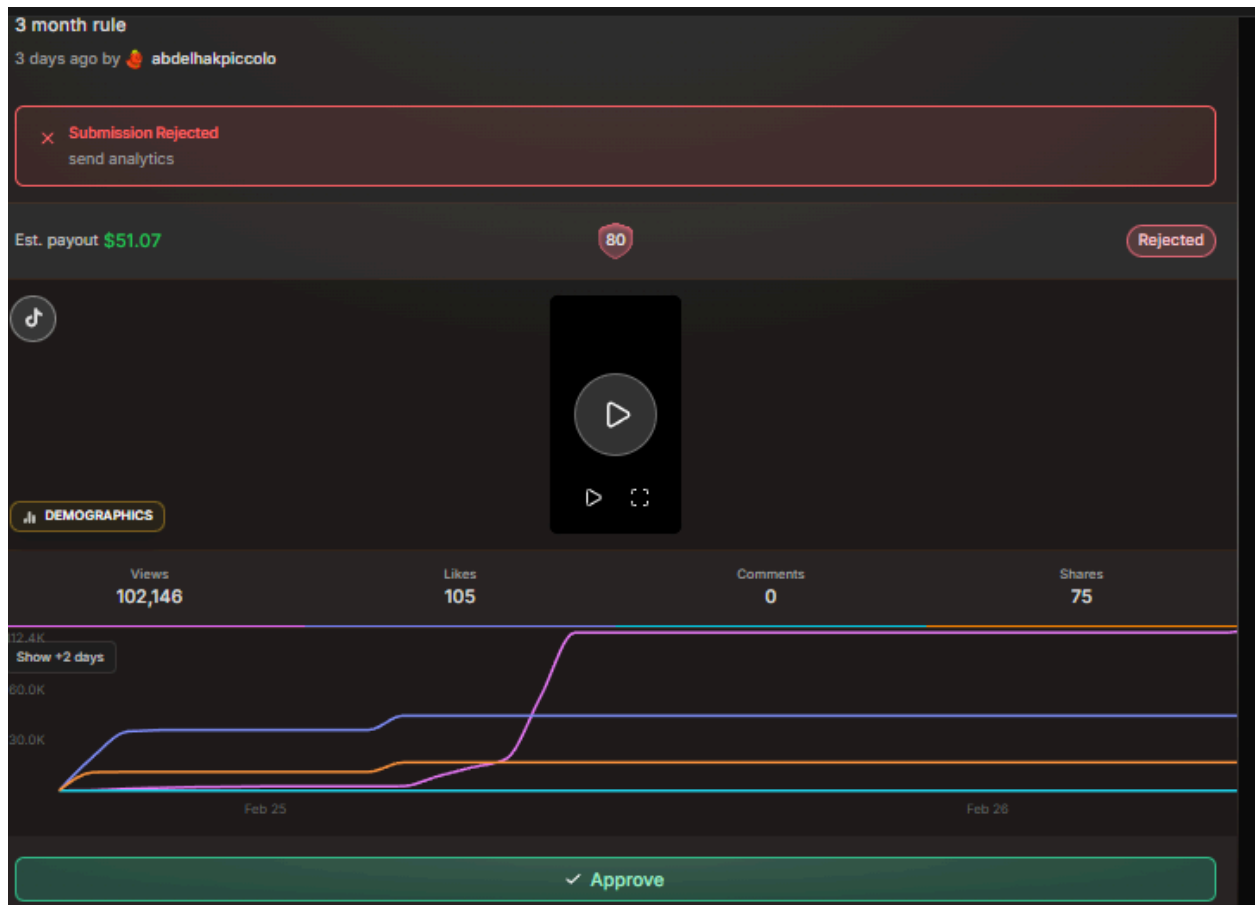

This indicates fake engagement added later.

Red Flag Pattern 3: Strange Vertical Spikes

- Sudden vertical jump in views
- No matching growth in engagement
- Graph looks unnatural or broken

Botted graphs often behave irregularly.

SOME EXAMPLES:

TripRank [CAR SLIDESHOWS] #2

JUST AN EXAMPLE OF REAL ENGAGEMENT:

6. Engagement Ratio Logic

General rule:

- Higher views require visible engagement
- No comments at high views = suspicious
- Engagement must look human

Always cross-check:

- Graph behavior
- Comments quality
- Account history

Never rely on numbers alone.

7. Final Action Rules

If Clearly Botting

- Reject immediately
- Ban if fully confirmed

If Suspicious

- Reject
- Write: "Send analytics in ticket"
- Review analytics carefully

If Clean

- Approve
 - Still monitor later
-

Post-Approval Monitoring

Approval is not final.

Creators sometimes:

- Bot after approval
- Inflate views to increase payout

Re-check high-view posts periodically.

If botting detected after approval:

- Reject submission
- Report immediately
- Prevent payout

No fake growth gets paid.

Final Reminder

Be strict.

Be observant.

Trust patterns, not excuses.

If engagement and views don't move naturally together, something is wrong.

When in doubt, double-check.
