

How to Check Video Analytics — Quick Review Table

Platform	What To Check	Normal Signs	Red Flags (Reject If Seen)
YouTube	Retention Graph	Gradual drop over time	Flat retention, sudden unnatural drop
	Views Graph	Progressive growth	Sudden unrealistic spike
	Engagement	Likes + comments proportional to views	30K+ views with almost no comments
	Audience Location	Matches campaign requirement	Majority from unrelated regions
Instagram	Reach vs Views	Reach at least 50–70% of views	20K views with 200–300 reach
	Traffic Sources	Mostly from Reels/Explore	50%+ from Profile or heavy Search
	Profile Activity	Some profile visits at high views	50K views with near-zero activity
	Audience Location	Meets Tier 1 requirement (if required)	Majority from low-quality regions

TikTok	View Graph	Views logically match graph scale	Total views don't align with graph
	Traffic Sources	Mostly For You page	50%+ from Profile
	Comments	Relevant, discussion, liked comments	Repeated comments, emoji spam, no engagement
	Watch Time	Reasonable for video length	Extremely low watch time at high views

Golden Rule

Never approve based on one metric.

Graph + traffic + comments + geography must all make sense together.

That's the cleanest and most practical version for fast reviewing.
